

Session X. Dissemination of Population Projections

11 March 2016

Cheryl Sawyer, Lina Bassarsky

Population Estimates and Projections Section

www.unpopulation.org

Considerations for a dissemination product

- Who is the audience for the product?
- What level of technical language will they understand?
- What elements do they need? Main findings? Detailed data?
- Have the methods and assumptions been documented?
- Are the assumptions that are necessary for user understanding presented in a clear way?
- Are the data and findings presented in a user-friendly manner?

Who needs, who uses population projections?

- Who are the users with whom you interact the most?
- What are their specific needs?
- Do you think policy makers understand the current trends in mortality and fertility that feed your population projections?
- Do they understand the implications of the uncertainty around estimates and projections?

Other questions

- How do you present your population projections' results? (reports? datasets? visualization?)
- What do you think may help disseminate population projections to different audiences in your country?
- Do you update your projections just after census or do you update them as new data are produced?
- Are other national institution producing population projections as well? Sectoral projections (health, education...)?

Thank you

Questions?

>> until 11 March:

>> After 11 March: sawyerc@un.org
